Today – Overcast to mostly cloudy with intermittent drizzle or showers early this morning. Scattered rain is expected to develop towards midday and will continue into the afternoon. Rain probabilities are expected to increase by late afternoon and into the early evening with an isolated embedded thunderstorm additionally possible. East-northeasterly winds will turn breezy, becoming sustained at 13-18 mph and gusting in the 20-25 mph range. **Forecast rainfall through 6pm: 0.10” – 0.25” | Sunrise: 6:47am / Sunset: 5:37pm**

Extended forecast – Widespread morning rain should become scattered Wednesday afternoon with a few embedded thunderstorms possible. A pattern of isolated morning and scattered afternoon showers is anticipated for Thursday and Friday as a slow-moving upper-level disturbance continues to rotate across the Florida Peninsula – with thunderstorm potential remaining isolated each afternoon. Breezy east-northeasterly winds are forecast through Thursday before easing Friday through the weekend. A drier and more stable airmass is expected to gradually filter in through the weekend, with only a few showers lingering into Saturday while dry conditions are currently anticipated for Sunday. Fog may develop prior to 8am Friday – Sunday.

Forecast prepared by DTN meteorologist Joe Halvorson.
