Today – Overcast to mostly cloudy skies are forecast throughout the day. A low coverage of passing showers is expected this morning into the early afternoon. Rain will become likely after 1400-1500 and will persist through 2100-2200 before diminishing to intermittent showers overnight. Winds will become sustained at 8-15 mph with occasional gusts to 20 mph around midday. The temperature will reach a high near 20°C or 68°F.

Forecast rainfall: 3-4 mm through 1900 with an additional 2-4 mm tonight | Sunrise: 0702 / Sunset: 2010

Day	Wed	Thu	Fri	Sat	Sun
Sky					
Weather	Scattered AM and likely PM rain; few storms	Patchy fog poss. prior to 0800; few showers	Mostly cloudy; scattered showers	Areas of fog prior to 0900; few showers	Mostly cloudy with scattered showers

Extended forecast – An area of low pressure will promote intermittent showers Wednesday morning with rain becoming more numerous after 1100-1200. A few embedded thunderstorms (20-30% lightning probability) may occur between 1200-1700 Wednesday afternoon, accompanied by brief heavy downpours and wind gusts of 30-35 mph. Precipitation should diminish in coverage after 1900 Wednesday. Blustery winds are forecast outside of any rain on Wednesday, becoming sustained at 13-18 mph and gusting between 23-28 mph. A few light showers remain possible on Thursday. A weak front may allow for scattered showers on Friday. Fog is possible on both Thursday and Saturday morning but should improve by 0800-0900. A few light showers or patches of drizzle may occur on Saturday. Another system could return the potential for scattered showers on Sunday, but confidence is currently lower with a large spread in the timing and coverage of any precipitation.
